

Roth Environmental Product Declarations (EPD)

What are EPDs?

EPD stands for Environmental Product Declarations:

- > Documents a product's environmental properties
- > Produced in relation to European and international standards
- > Verified by an independent third party, which ensures transparent and consistent environmental documentation
- > Based on a life cycle assessment – LCA, based on specific data from the given product and manufacturer
- > The result is a number of environmental impact categories, e.g. global warming, depletion of the ozone layer, depletion of natural resources and acidification of soil and watercourses.

Roth EPD

Roth North Europe A/S continuously develops EPDs for several products. This gives consultants, architects and other construction experts the opportunity to use our product specific EPDs to form a picture of a building's overall environmental impact.

Please scan the QR code to see our EPDs.

If you have questions about our EPDs or want a project specific EPD, please contact sustainability@roth-northeurope.com.
