Living full of energy

New Roth Touchline® BL Wired Room Thermostat 24V with digital display

As an add-on to the well-known Roth Touchline® BL 24V wired control system, Roth now introduces a new wired thermostat in a totally new design and with a digital display.

The new thermostat which is compatible with all generations of Roth Touchline® BL 24V controllers is the choice when replacing older Roth 24V thermostats.

It is not just a stylish upgrade for existing installations: The thermostat is easily operated via physical buttons, and you get several new features especially suited to rental properties or rooms in public areas like schools, public housing, etc. Among these you find the possibility of limiting allowed set temperatures as well as key locking.

The room thermostat is available in white as well as in black.

Main features

- > Possibility of limiting allowed set temperatures
- > Key lock possibility
- > Compatible with all generations of Roth Touchline® BL 24V controllers
- > Easy replacement of older Roth Touchline® BL 24V thermostats
- > Available in white and black

The Roth Touchline® BL system

Roth Touchline® BL is a wired, 24-volt system designed for individual control and temperature regulation in rooms with underfloor heating.

The system consists of a 6 or 12-channel control unit wired to the thermostats. It has been developed especially for the North European market by Roth, and the system is suitable for all Roth shunts/mixers and distributor systems.

The system has a wide range of features that makes it quick and easy to install, while ensuring a perfect and economical comfort for the users, and long service life for the pump, valves, and actuators.
